Brazilian labs give Bureau Veritas access to industrial giant

In June 2008, [Votorantim](#), one of [Brazil](#)'s largest industrial groups, chose Analytical Solutions for an environmental contract.

Environmental responsibility

Our company's role in the contract is to help Votorantim Metals improve its environmental responsibility. This means that we have two permanent field operators that monitor and analyze soil, waste water and drinking water at their Tres Marias zinc-processing site. Our people also guide Votorantim staff in carrying out their own environmental site monitoring.

Analytical Solutions is one of South America's leading providers of environmental analysis, so it is obviously a valuable addition to the Bureau Veritas network. The company has labs in three locations, featuring some of the most sophisticated testing equipment available in Brazil. "Our machinery and analysis facilities are the strength points", explain **Henrique Mendes**, commercial manager and **André Giglio**, Business Manager, Industry & Facilities in Brazil.

Potential for growth

Votorantim is an extremely diverse group with activities across many industrial, financial and other business sectors.
