

Constantia Flexibles operates two Competence Centers

2016-02-18

Constantia Flexibles has two state-of-the-art Competence Centers for the research and development (R&D) of aluminum, lacquers and co-extrusion coating polymers at Constantia Teich in Austria as well as films and film laminates for flexible packaging at Constantia Flexibles production plant in Weiden, Germany.

Our innovation efforts are focused on creating flexible packaging solutions for our customers that make products more attractive and easier to use, adding barrier and offering function features such as easy peel and reclose for example. In addition the Competence Centers are an efficient service provider for customer-specific projects and solutions.

Some 85 employees operate in the field of R&D and Innovation in a highly professional environment.

Competence Center Aluminum Foil and Foil Laminates (Constantia Teich, Austria):

- Aluminum raw materials and foils
- Extrusion coating compounds and processes
